

The Pillow Wall will often arrive partially assembled, hooked together in vertical columns of predetermined height. If the columns happen to come unhooked in transit, follow the steps below to create the finished Pillow Wall. Extra tie line and 2" binder ring will also be provided.

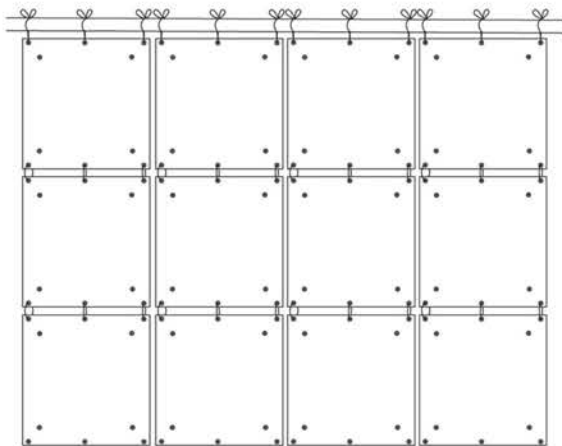

**Dimensions**

2'h x 2'w x 1"d

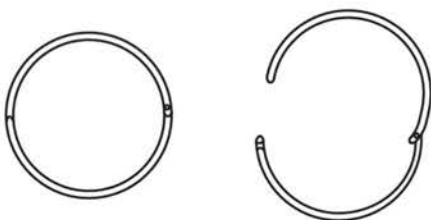

**STEP ONE**

Start by hanging one column of pillow walls to the far side of the truss or pipe.

**STEPTWO**

Continue to hang the columns so that the vertical sides nearly touch. Work from one end of the truss so that the spacing of the columns is even.

**Note**

2" binder rings open at a hinge and are used to connect the tops and bottoms of the pillow wall panels.
