

SlotLok

One modular system.
Endless design options.

SLOTLOK MODULAR SYSTEMS

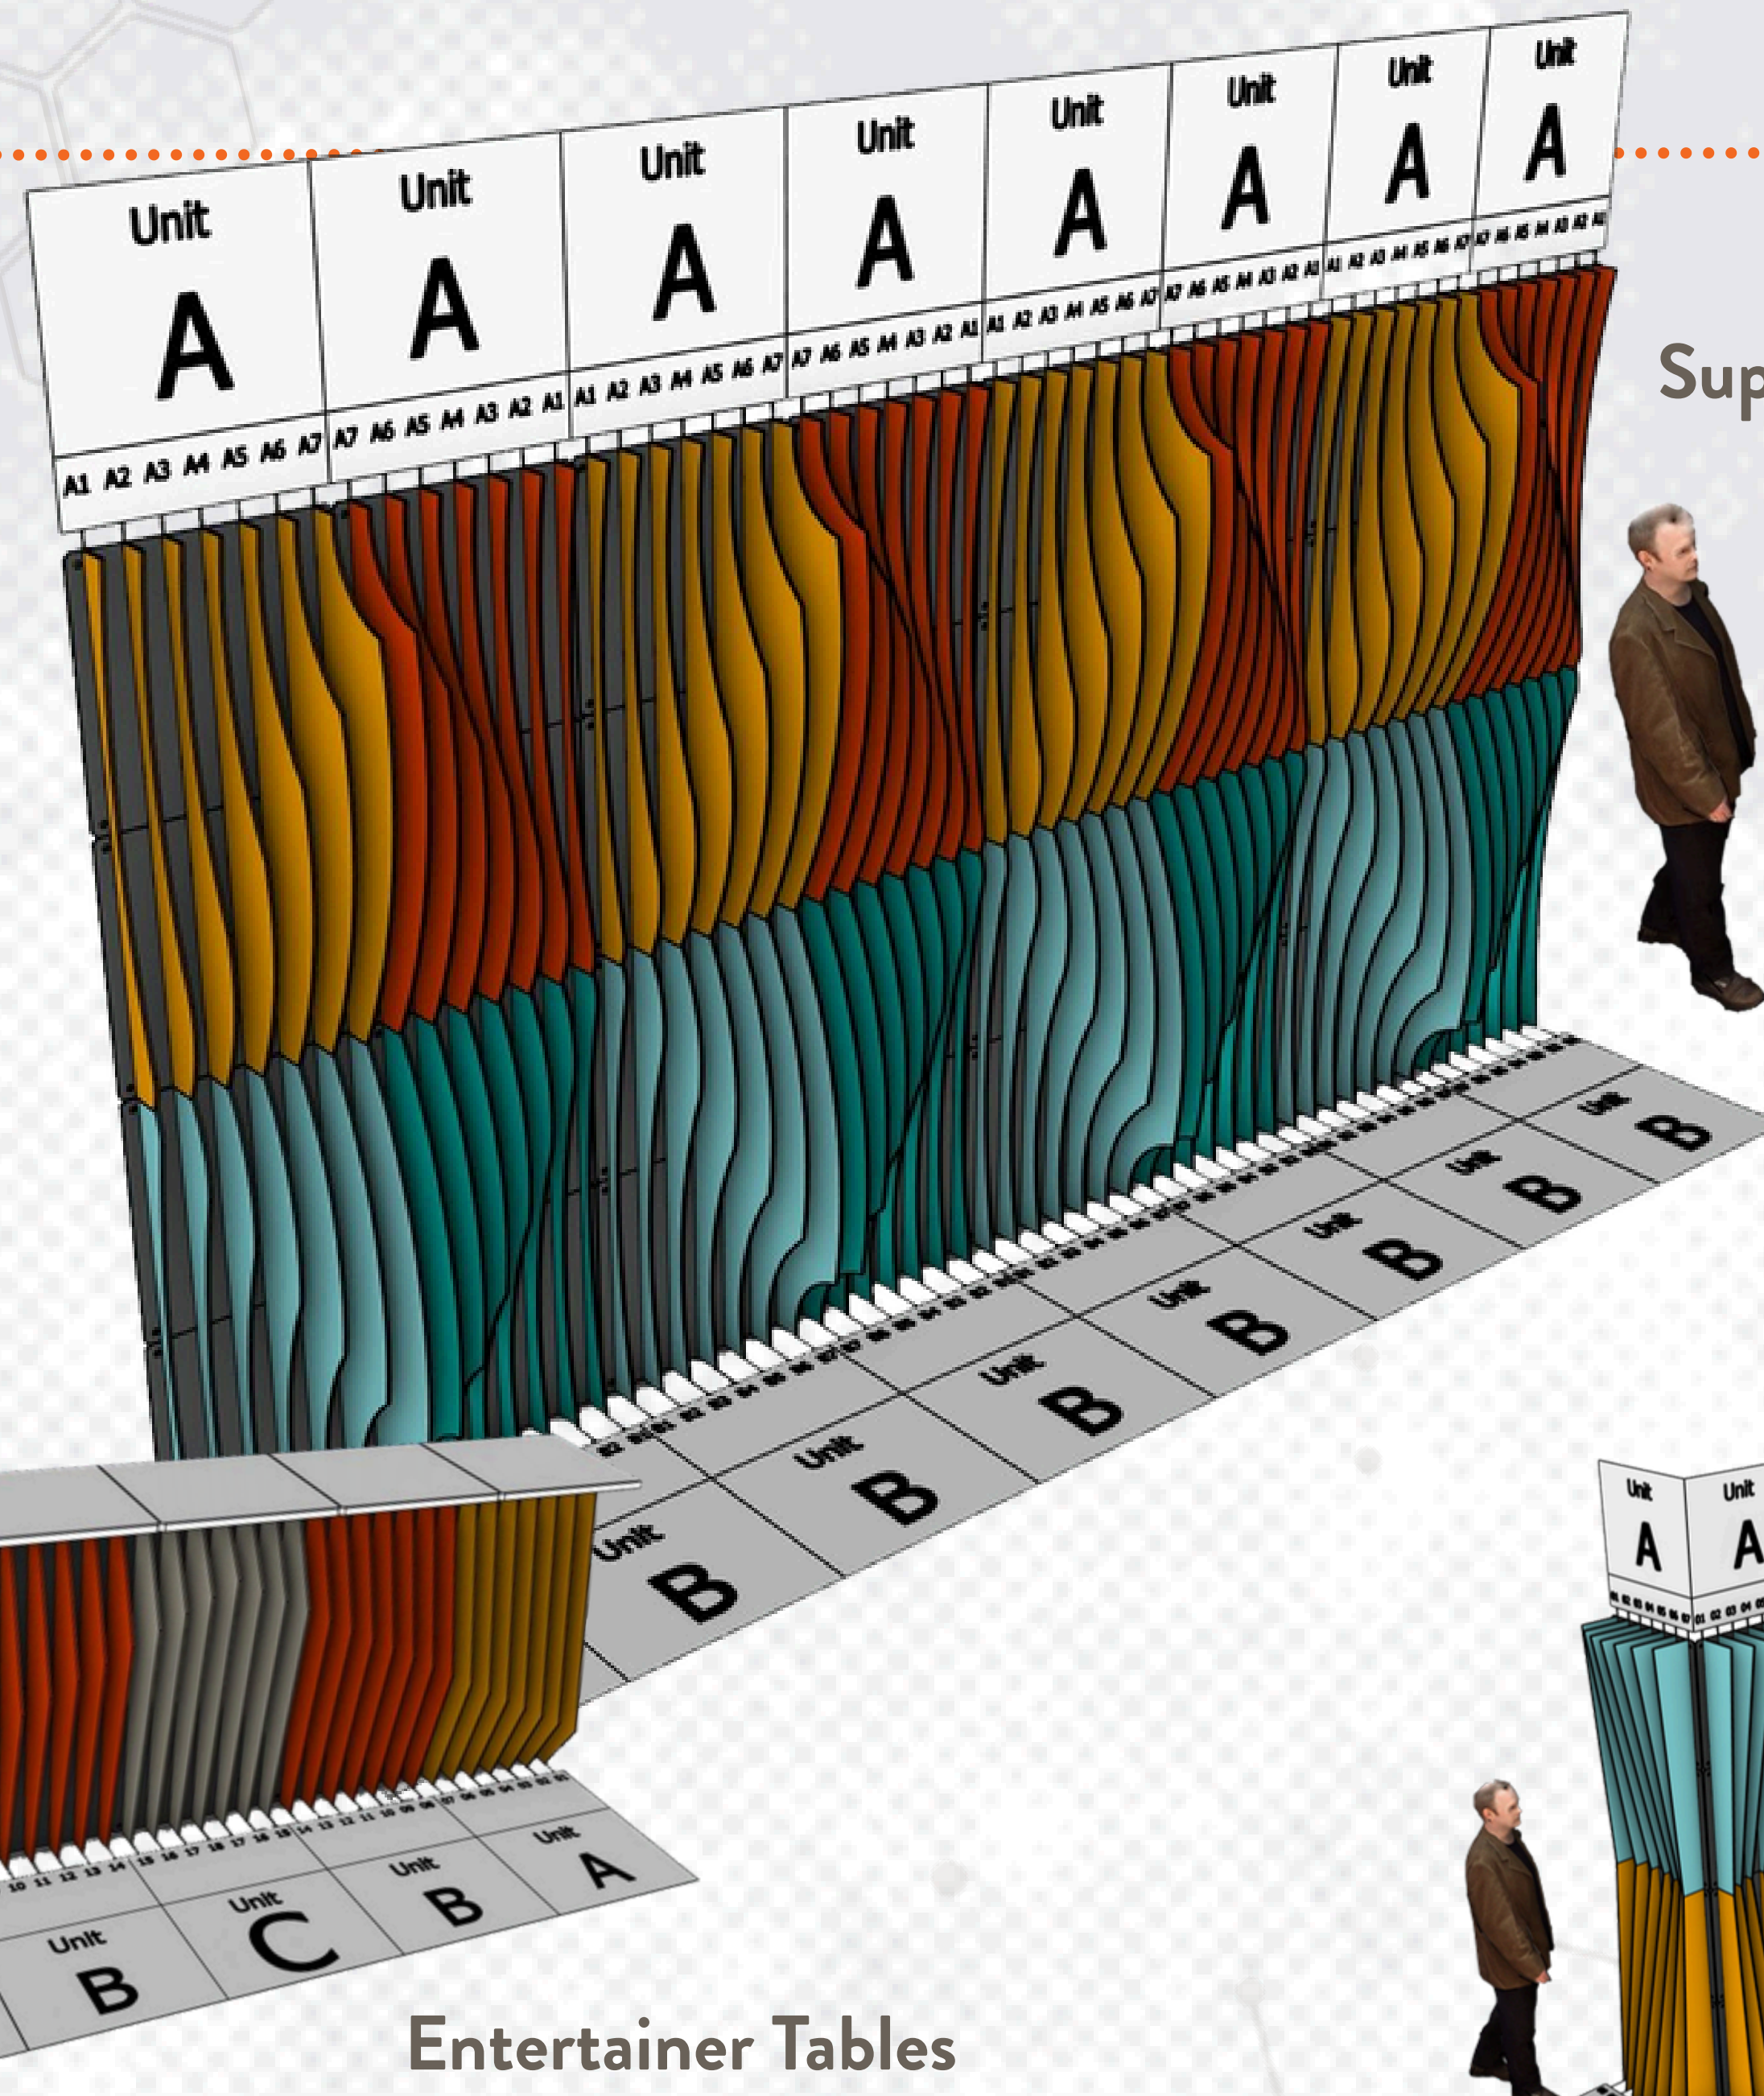

SlotLok panels flex across **SuperColumns**, **SuperWalls**, and **SuperFlats** without changing the underlying system.

SLOTLOK

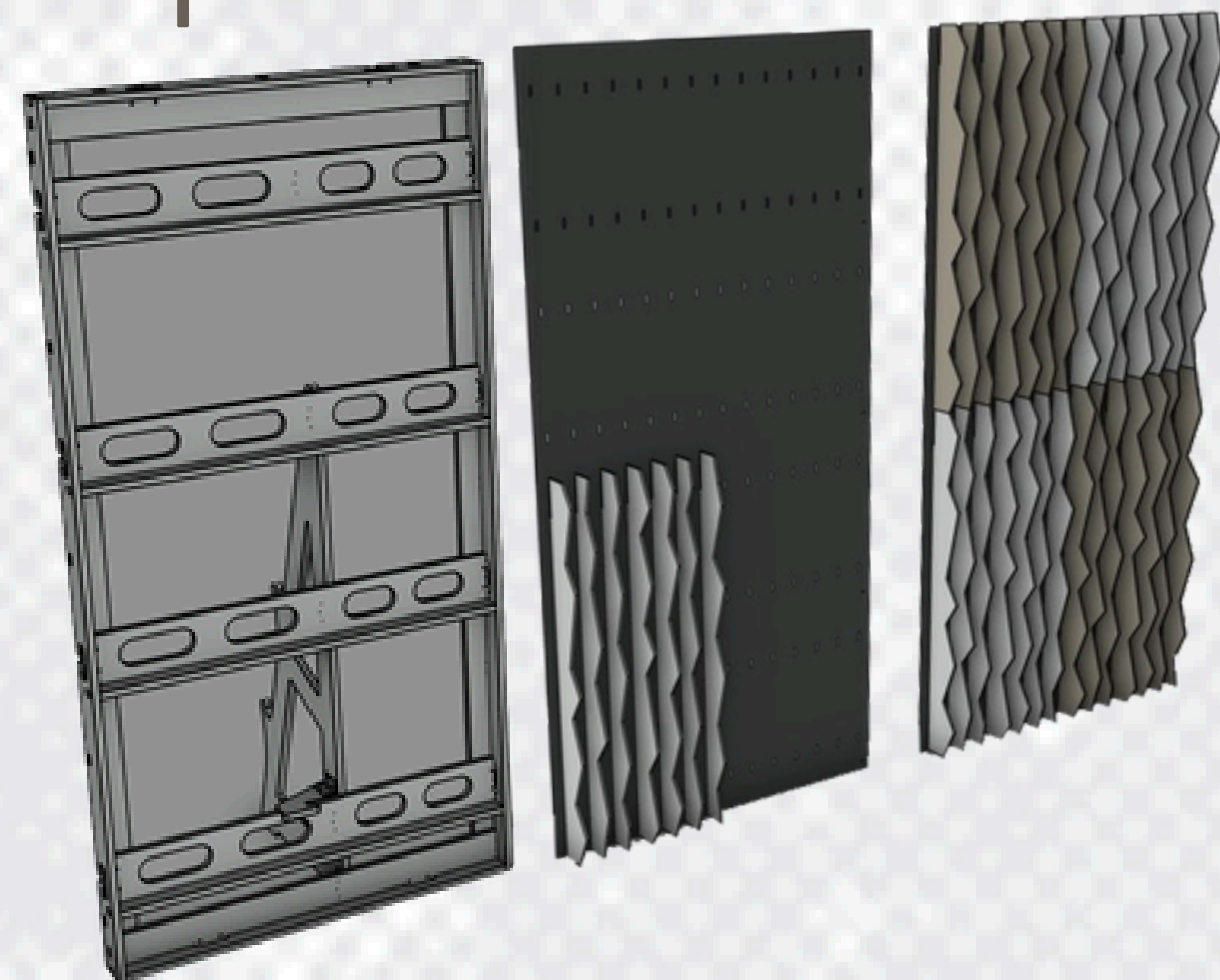

System Configurations

Different orientations of the same panels flex across the system.

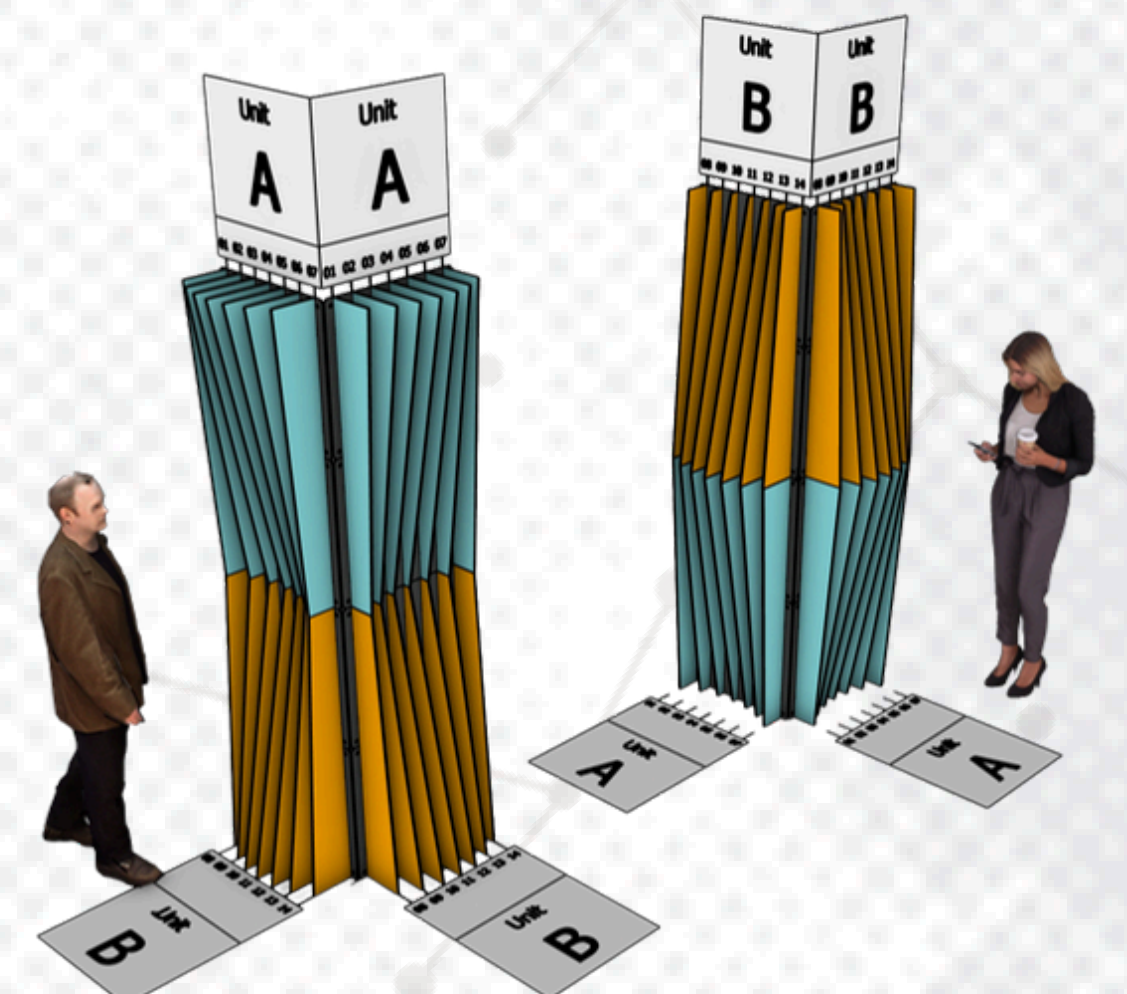

SuperWalls

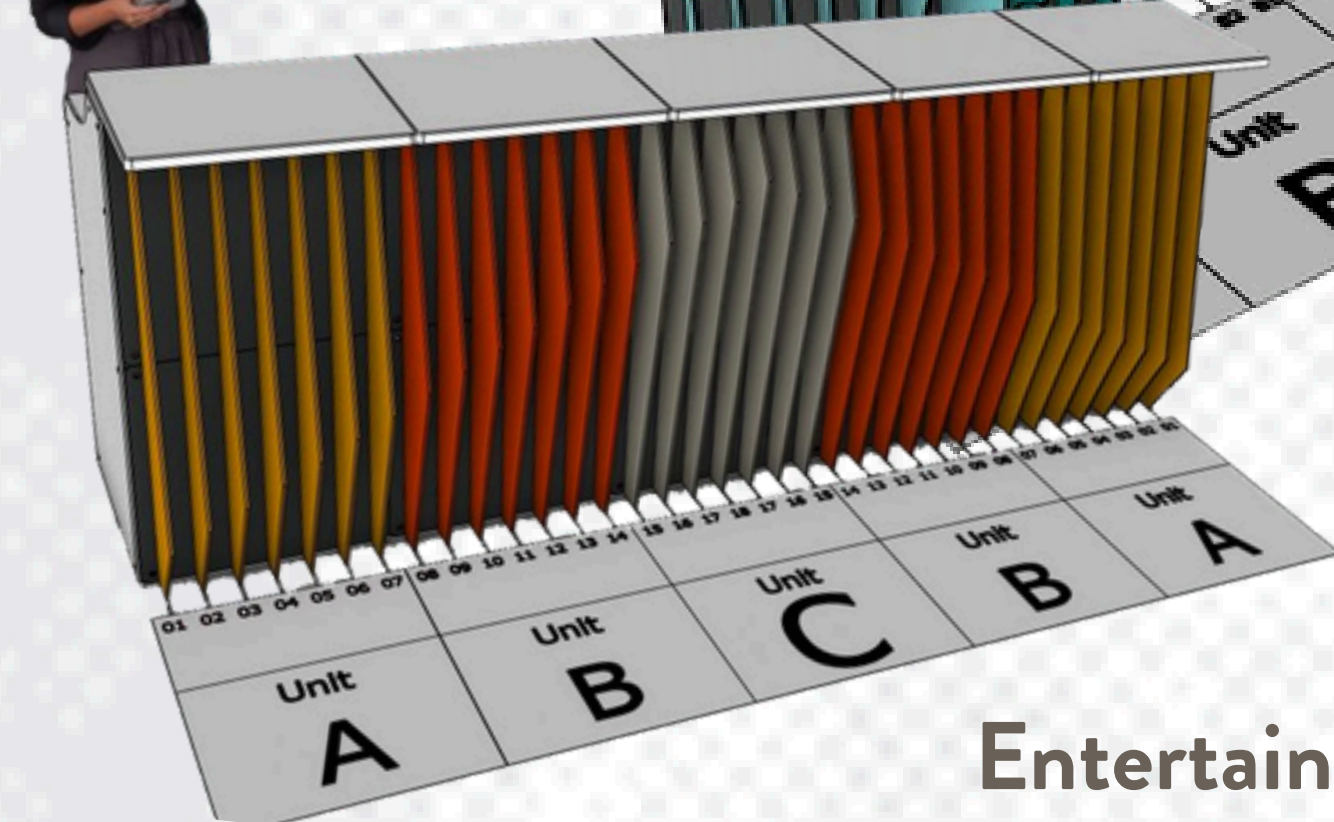

SuperFlats

SuperColumns

Entertainer Tables

SLOTLOK DESIGNS

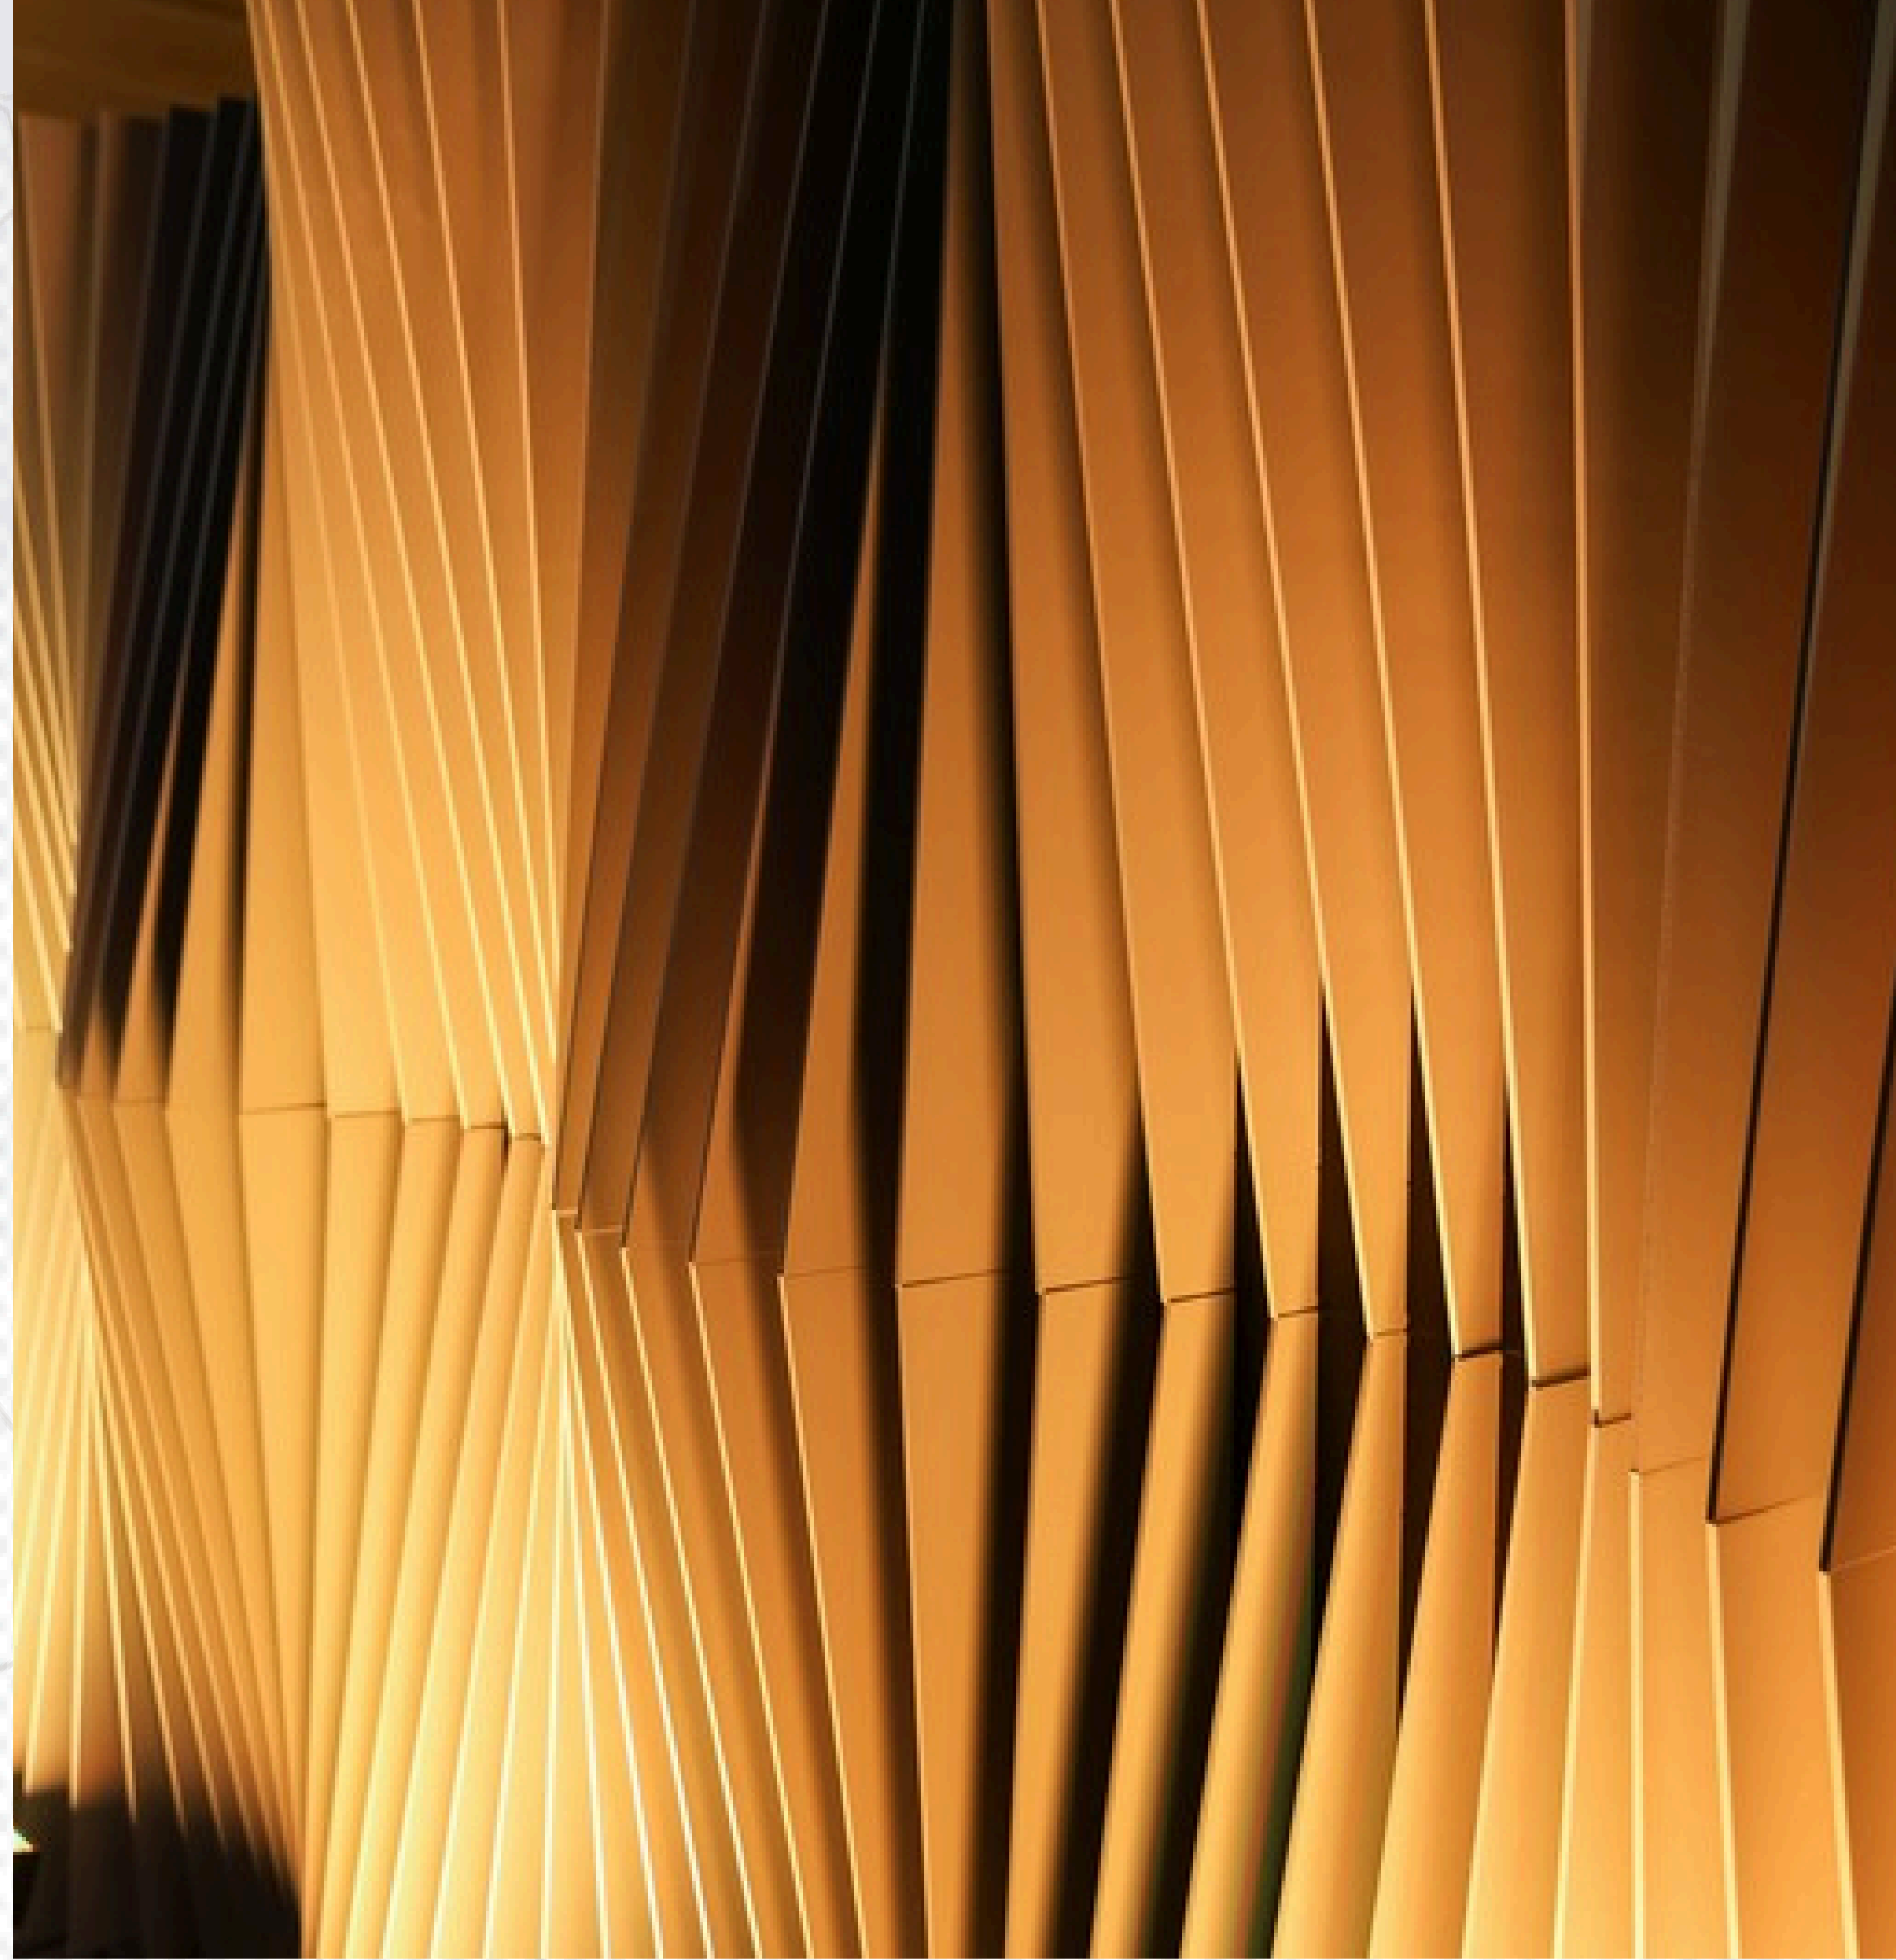

Shape space. Guide movement.
Support content. Create environments.

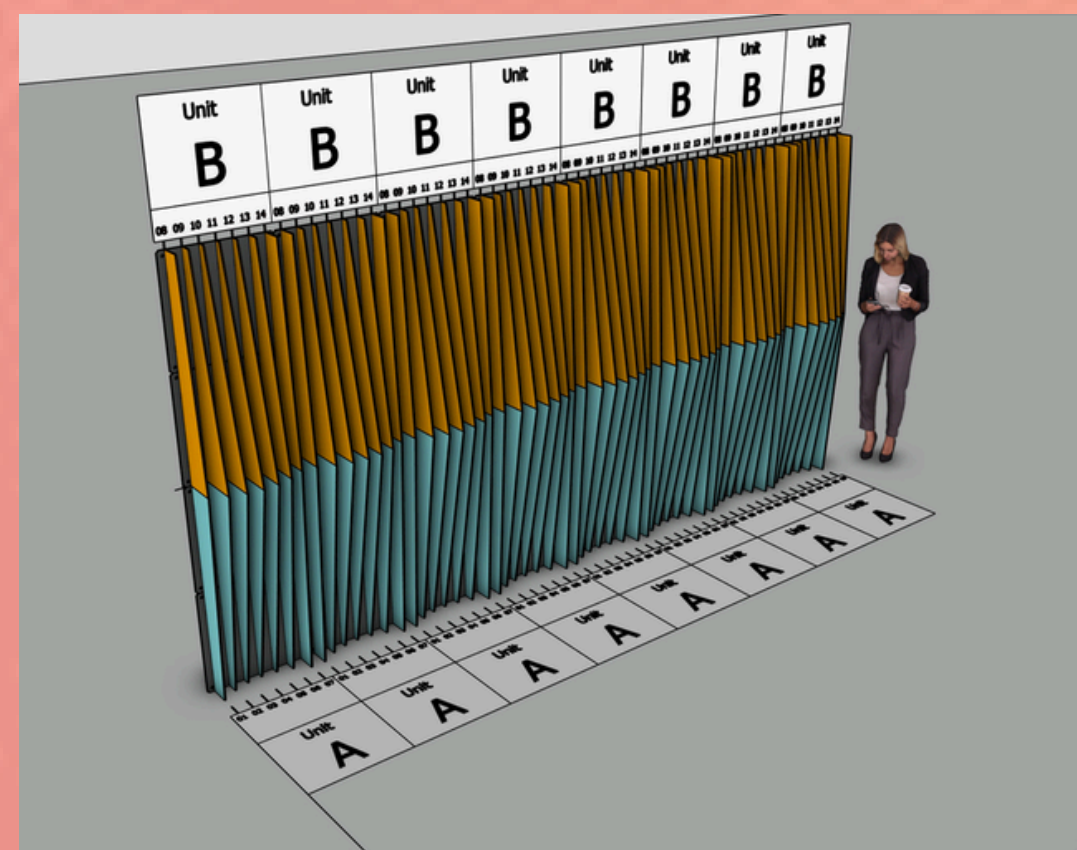

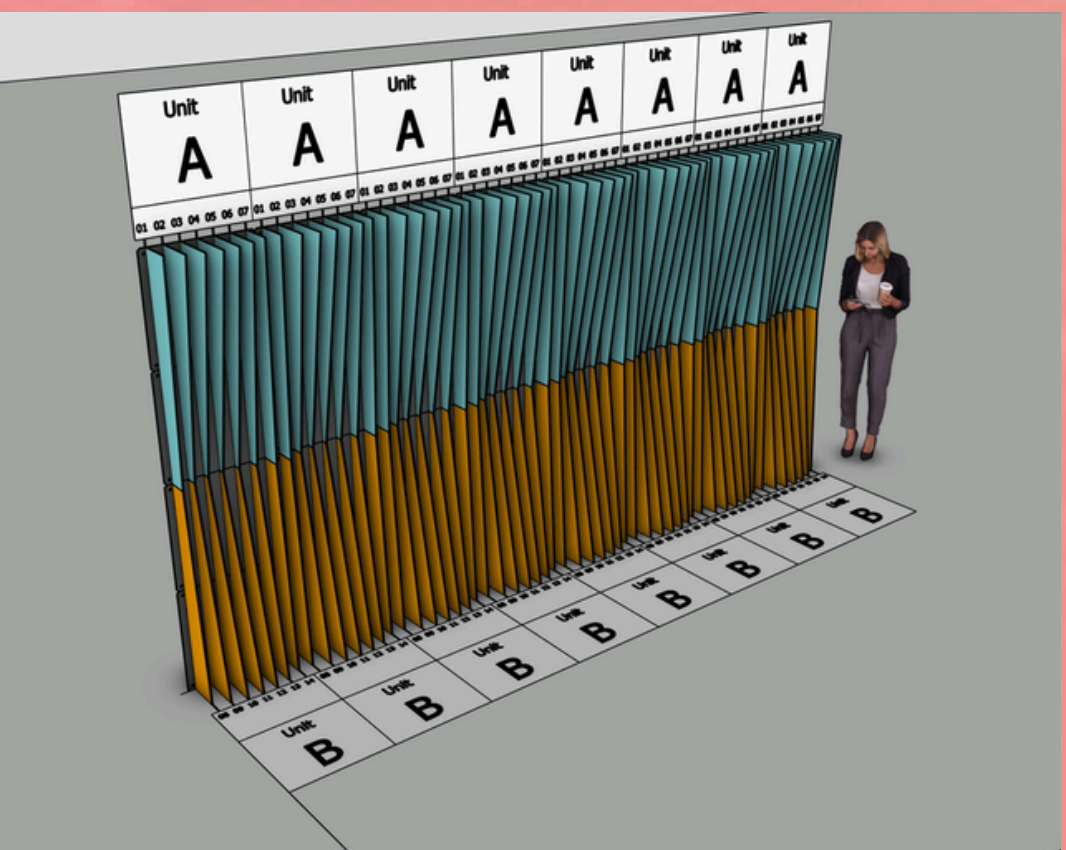

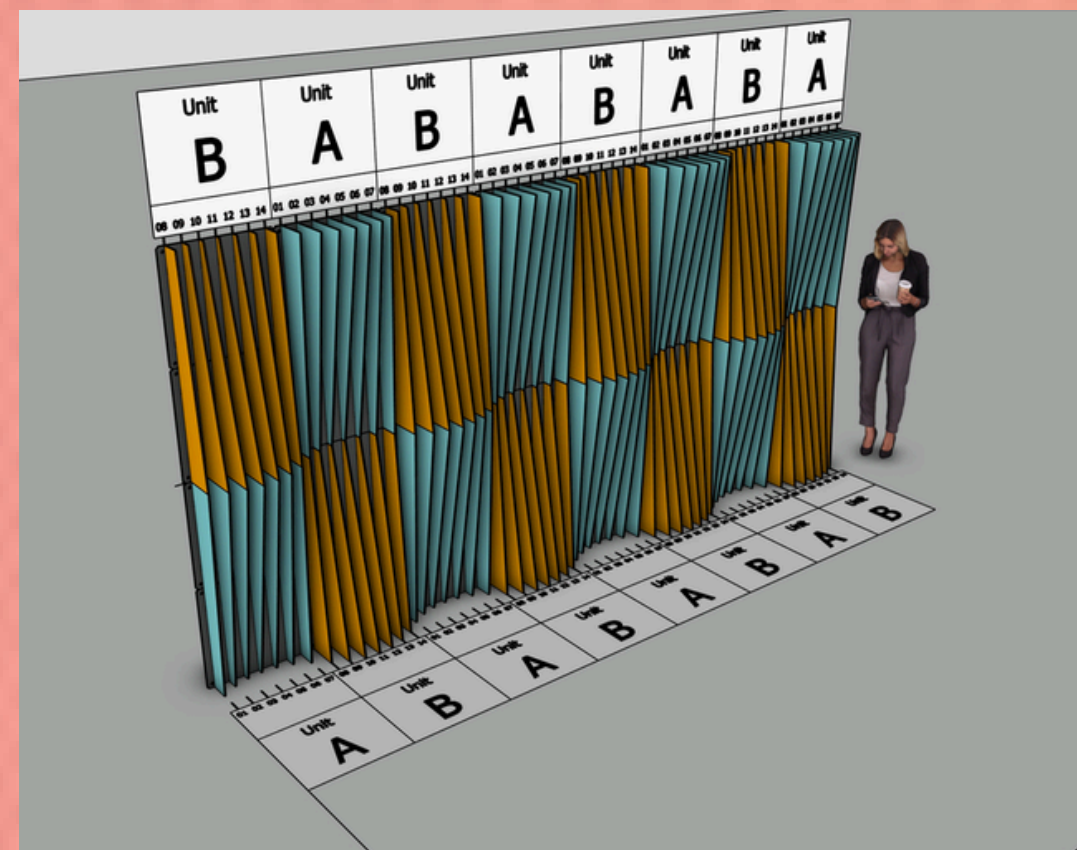

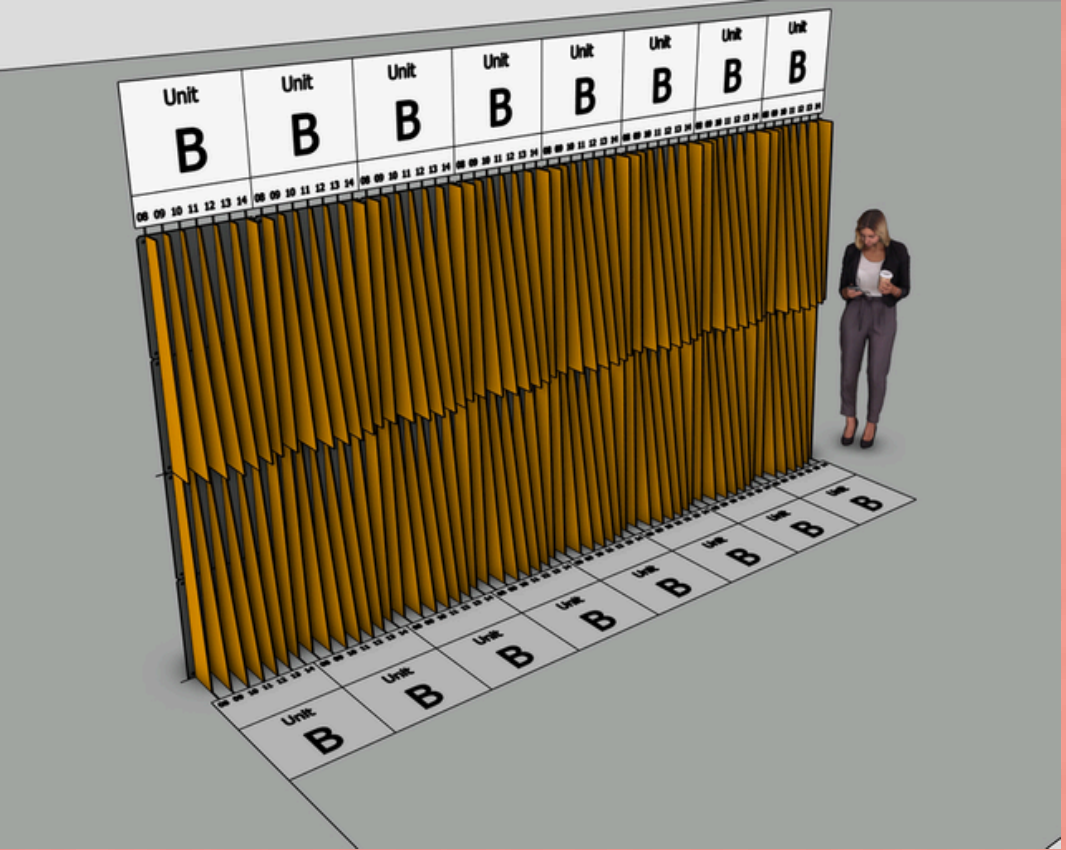

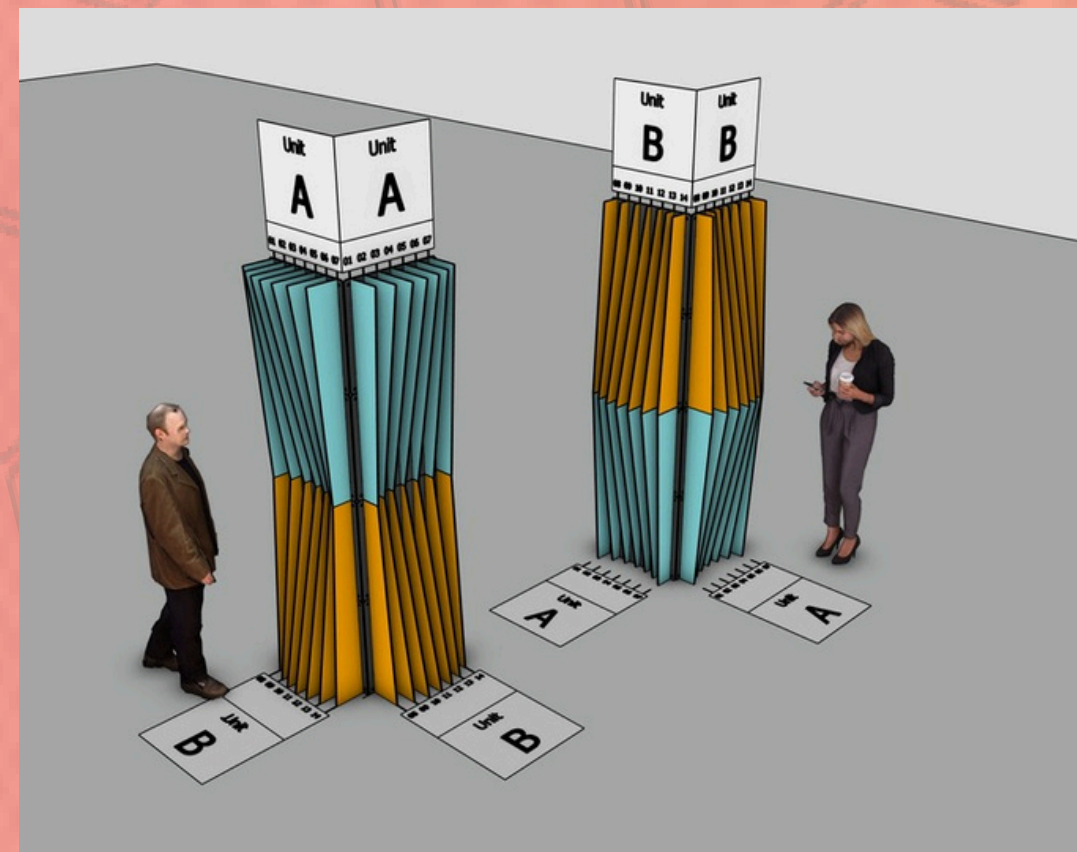

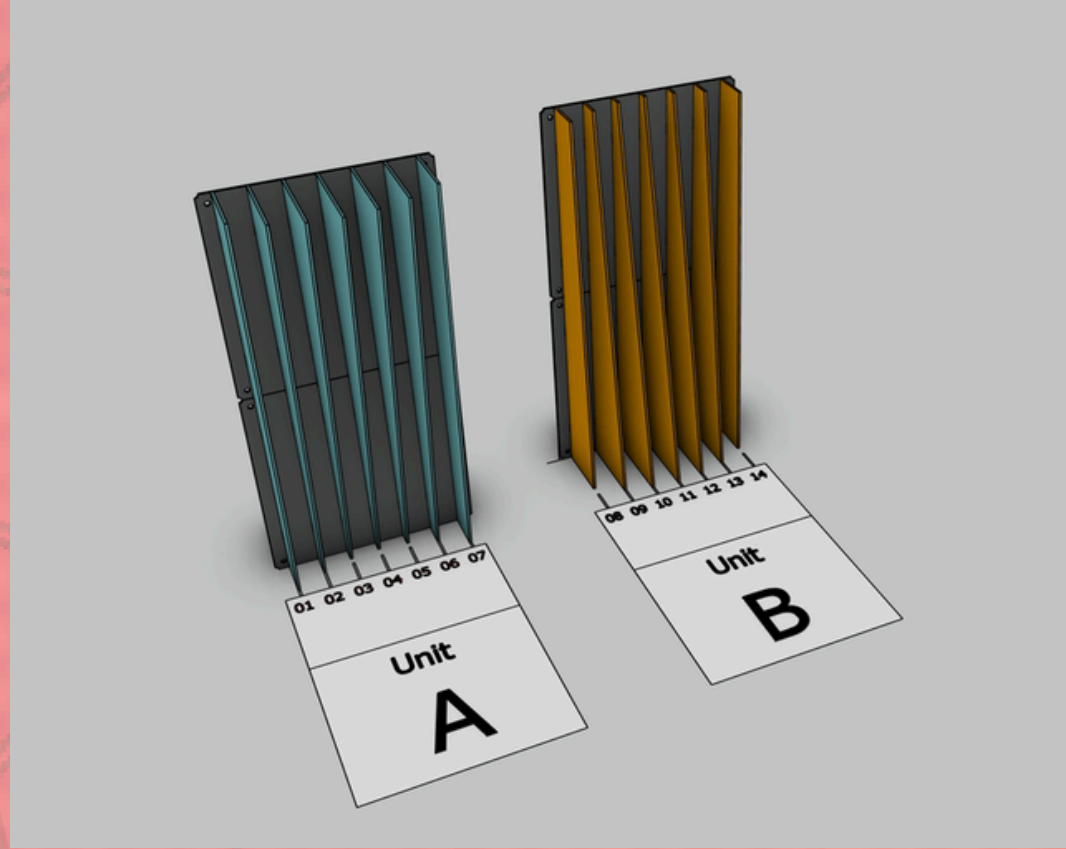

RIPPLE

A flowing surface that introduces movement while staying visually calm and adaptable.

Available as SuperColumns, SuperWalls, and SuperFlats.

RIPPLE

One panel.
Multiple expressions.

RIPPLE

“Swish” Layout

Visual Read

Soft, curtain-like surface.
Continuous flow with minimal visual breaks.

Expression

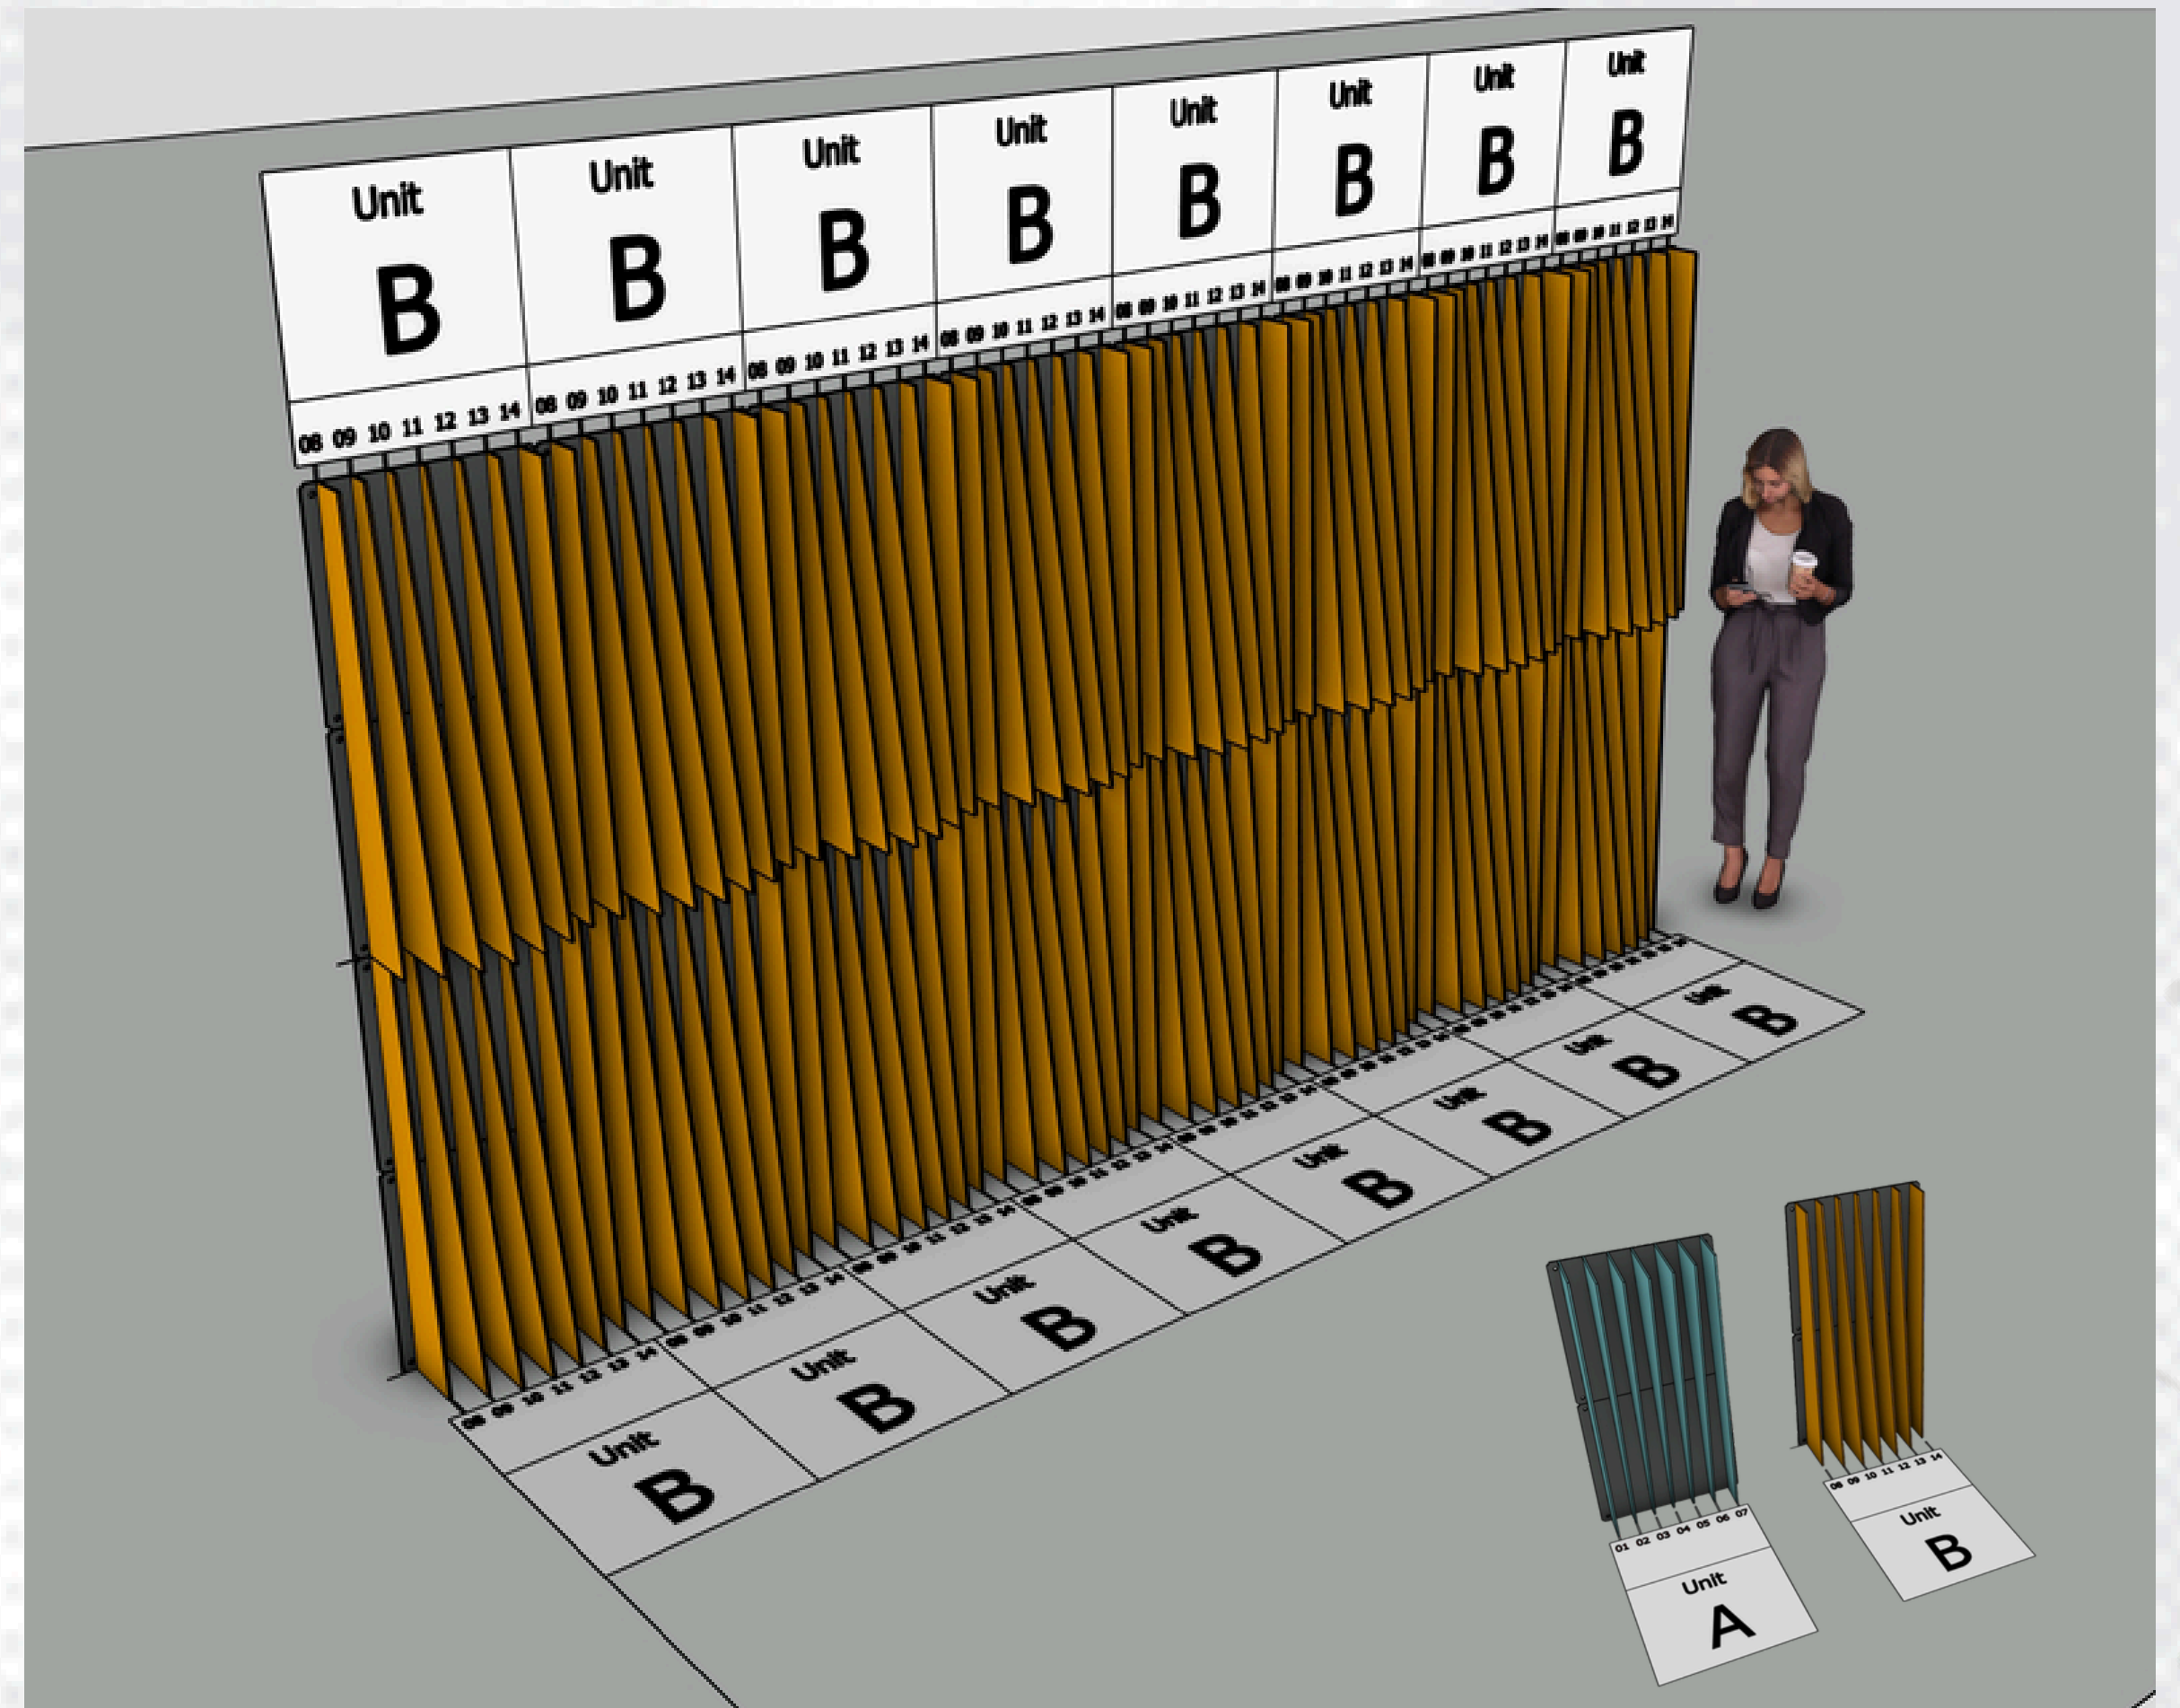

Calm • Fluid • Tactile
Movement is created through light and shadow, not pattern shifts.

Best Used For

- Long wall runs
- Perimeter backdrops
- Immersive environments
- Ambient motion environments

Design Notes

- Built from repeating the same panel orientation
- Supports content without calling attention to panel logic
- Pairs well with lighting washes and brand color fields

RIPPLE

“Weave” Layout

Visual Read

Interlaced surface with a clear rhythmic pattern and architectural texture. Alternating orientation adds visual depth and intentional structure.

Expression

Dynamic • Structured • Graphic

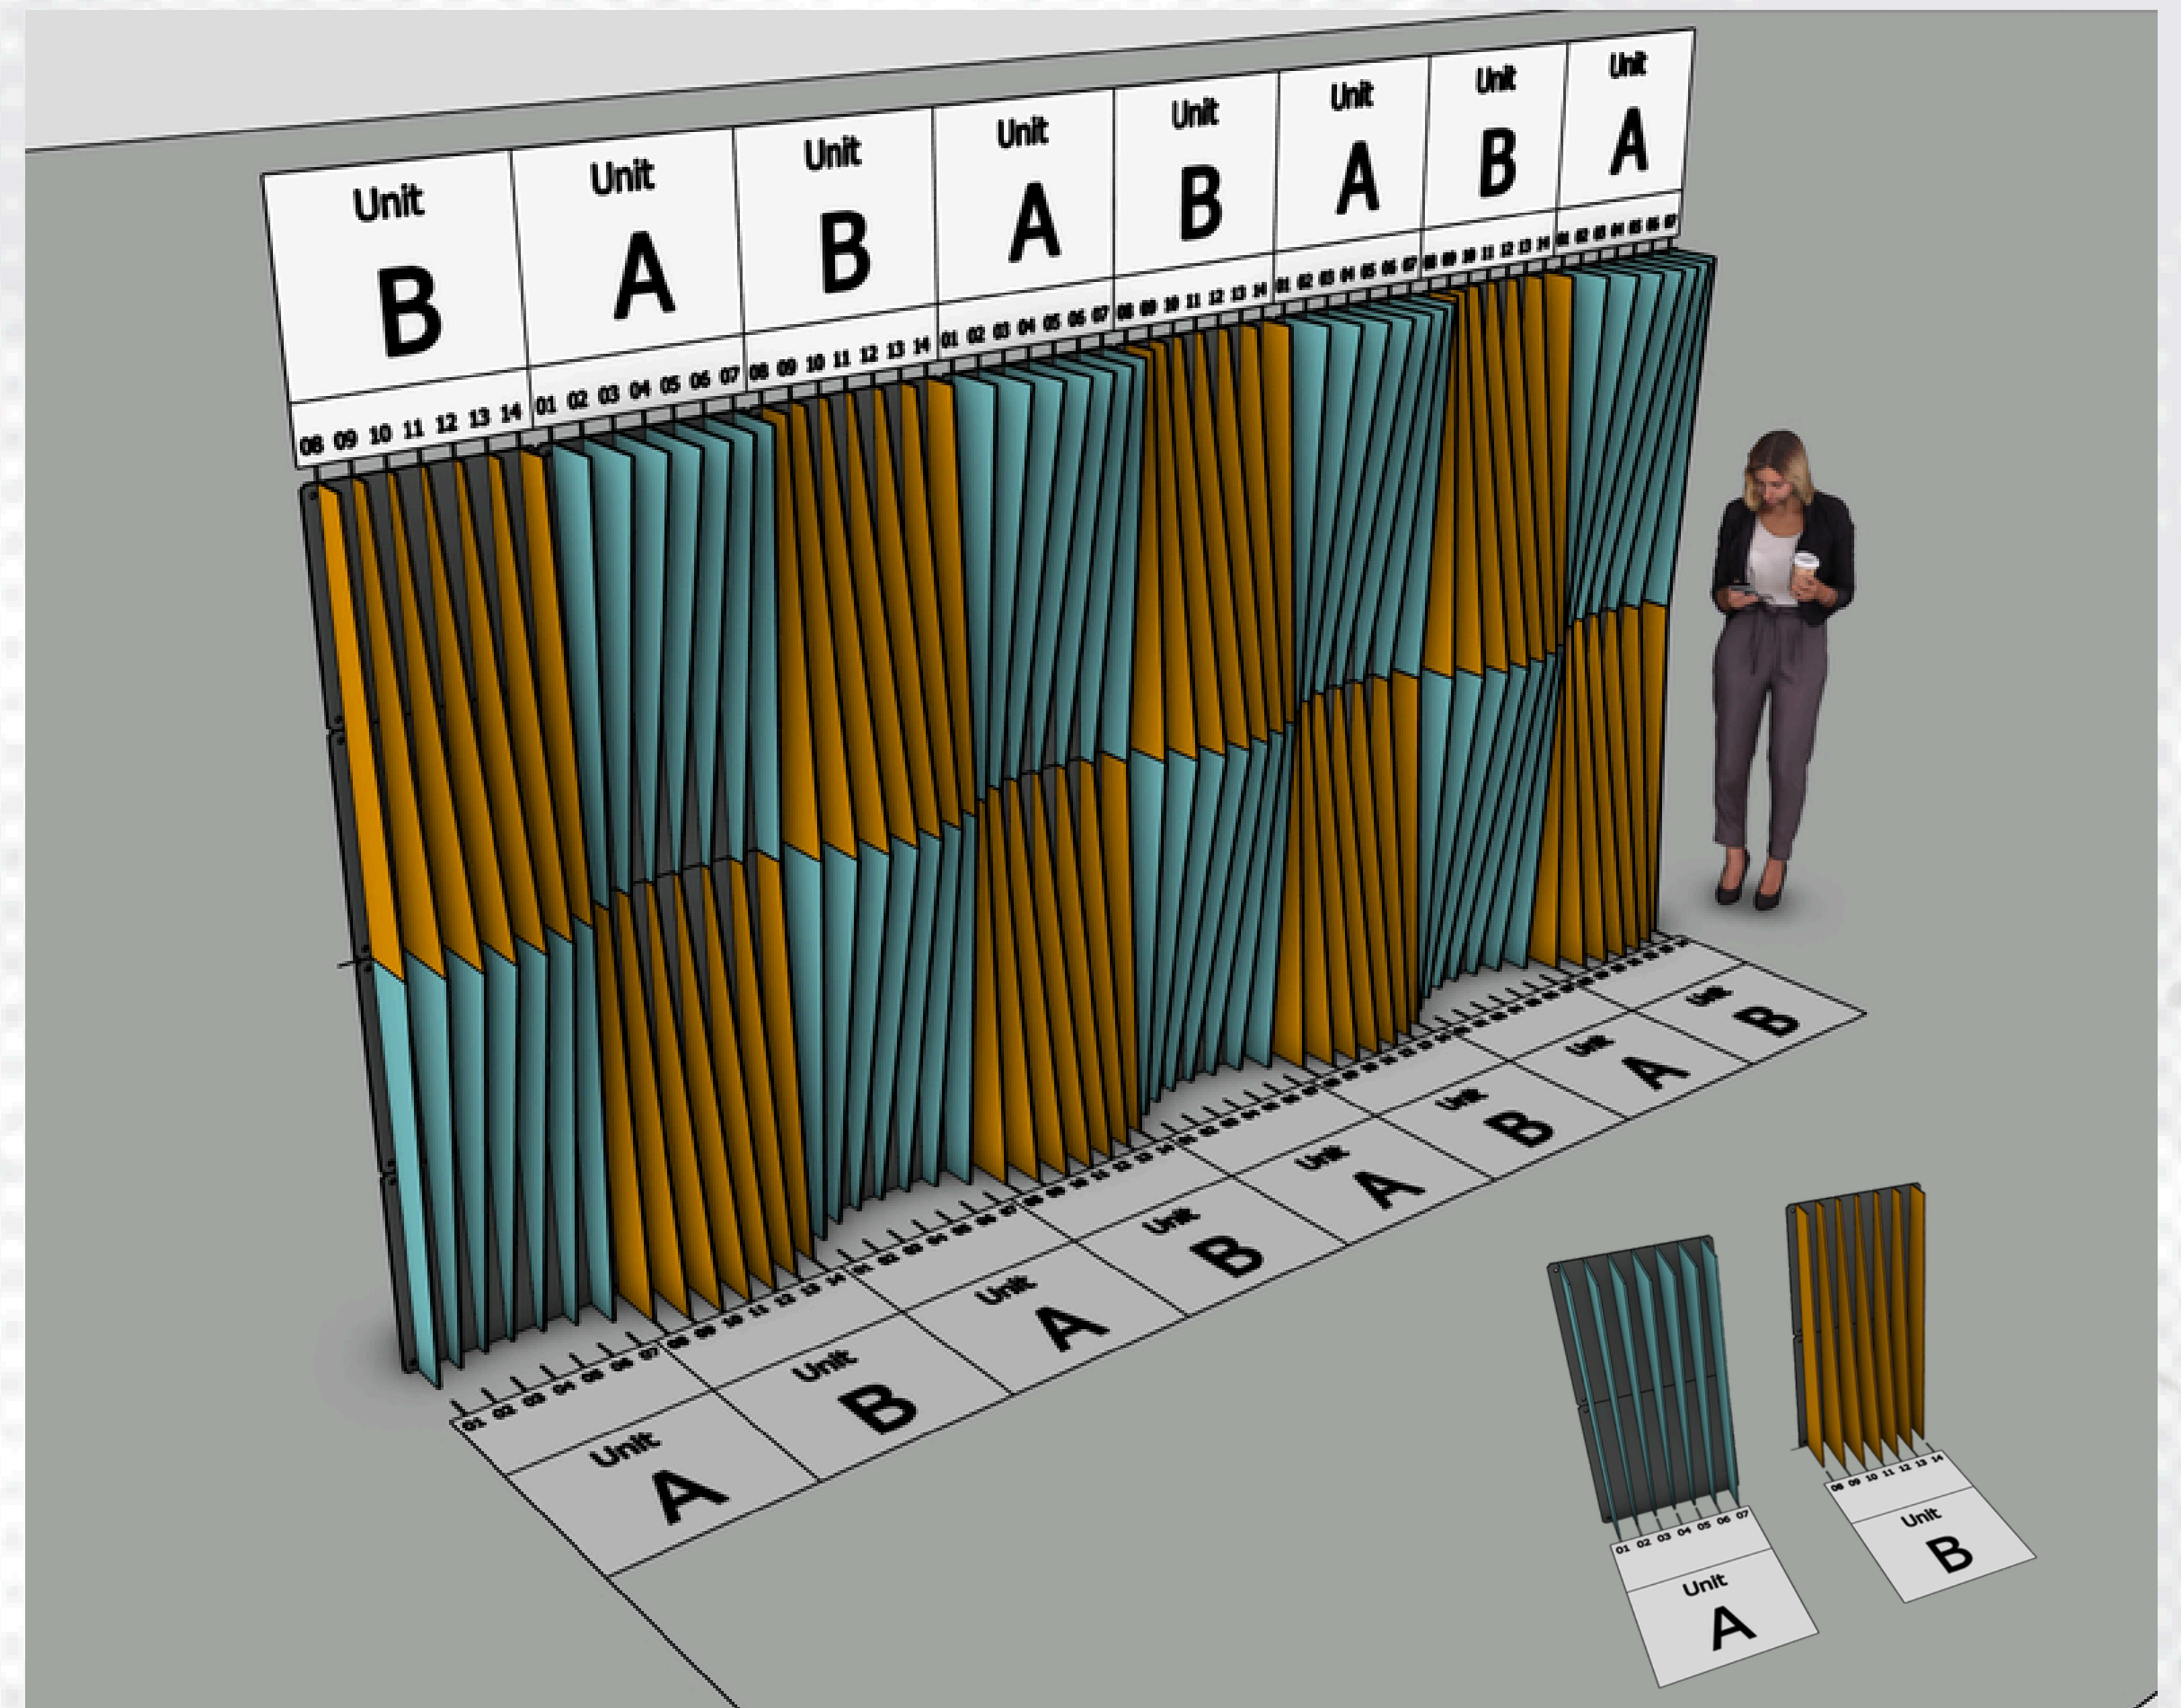

Movement is created through repetition and contrast, giving the surface energy without chaos.

Best Used For

- Feature walls and brand moments
- Content-adjacent surfaces that need visual interest
- Environments that benefit from visible rhythm and texture
- Applications where structure should feel visible and intentional

Design Notes

- Created by alternating panel orientation across the same system
- Emphasizes pattern and cadence rather than drape or flow
- Scales well across walls, columns, and flats
- Balances bold visual identity with modular consistency

RIPPLE

“Flare” Layout

Visual Read

A unified, horizontal flow and a clean visual break.
Smooth, directional movement that’s expansive and intentional.

Expression

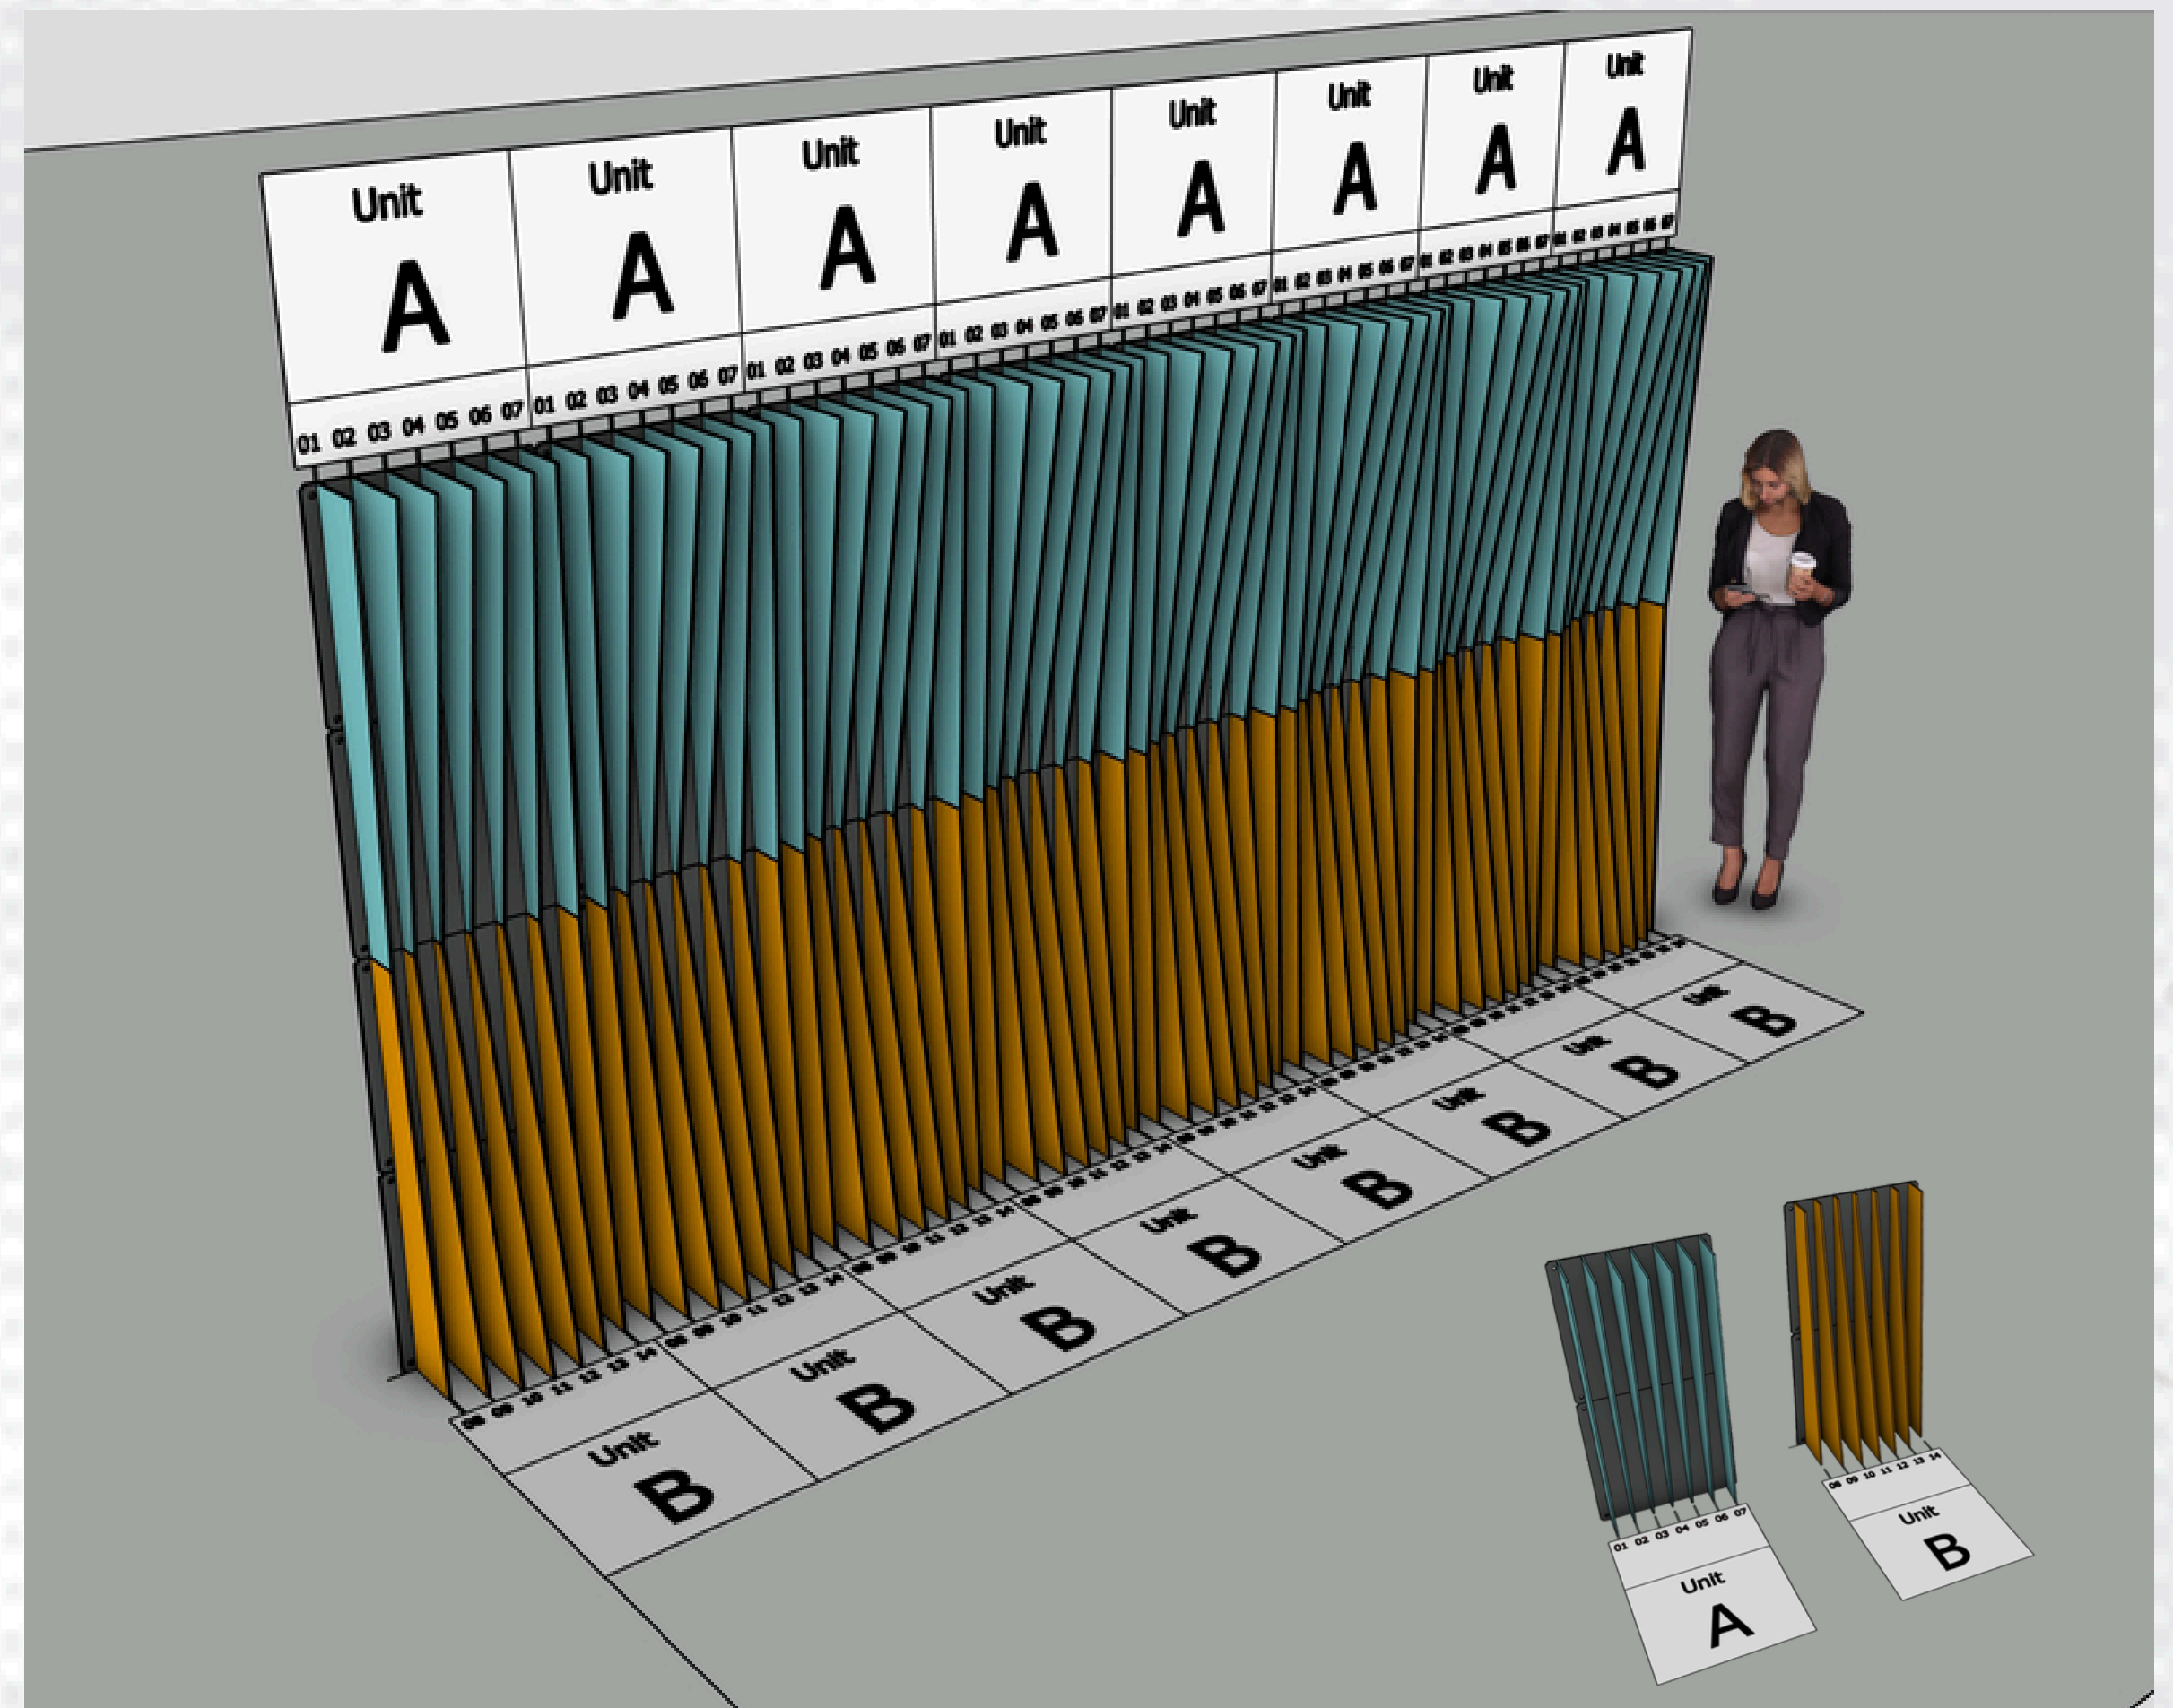

Grounded • Directional • Architectural Clarity
Movement is a continuous lateral shift for a composed, confident presence.

Best Used For

- Long wall runs where visual continuity matters
- Backdrops that need scale without visual noise
- Brand environments that benefit from a clear directional cue
- Spaces where motion should feel steady, not dynamic or playful

Design Notes

- Built from a consistent panel orientation across the run
- Emphasizes horizon lines and visual grounding
- Reads strongest at scale and with even lighting washes
- Ideal when the scenic surface should feel polished and controlled

RIPPLE

“Swell” Layout

Visual Read

Broad surface with a gentle central expansion and rippling, tapered edges. Depth concentrates at the center, creating a composed, sculptural presence across the run.

Expression

Expansive • Calm • Sculptural

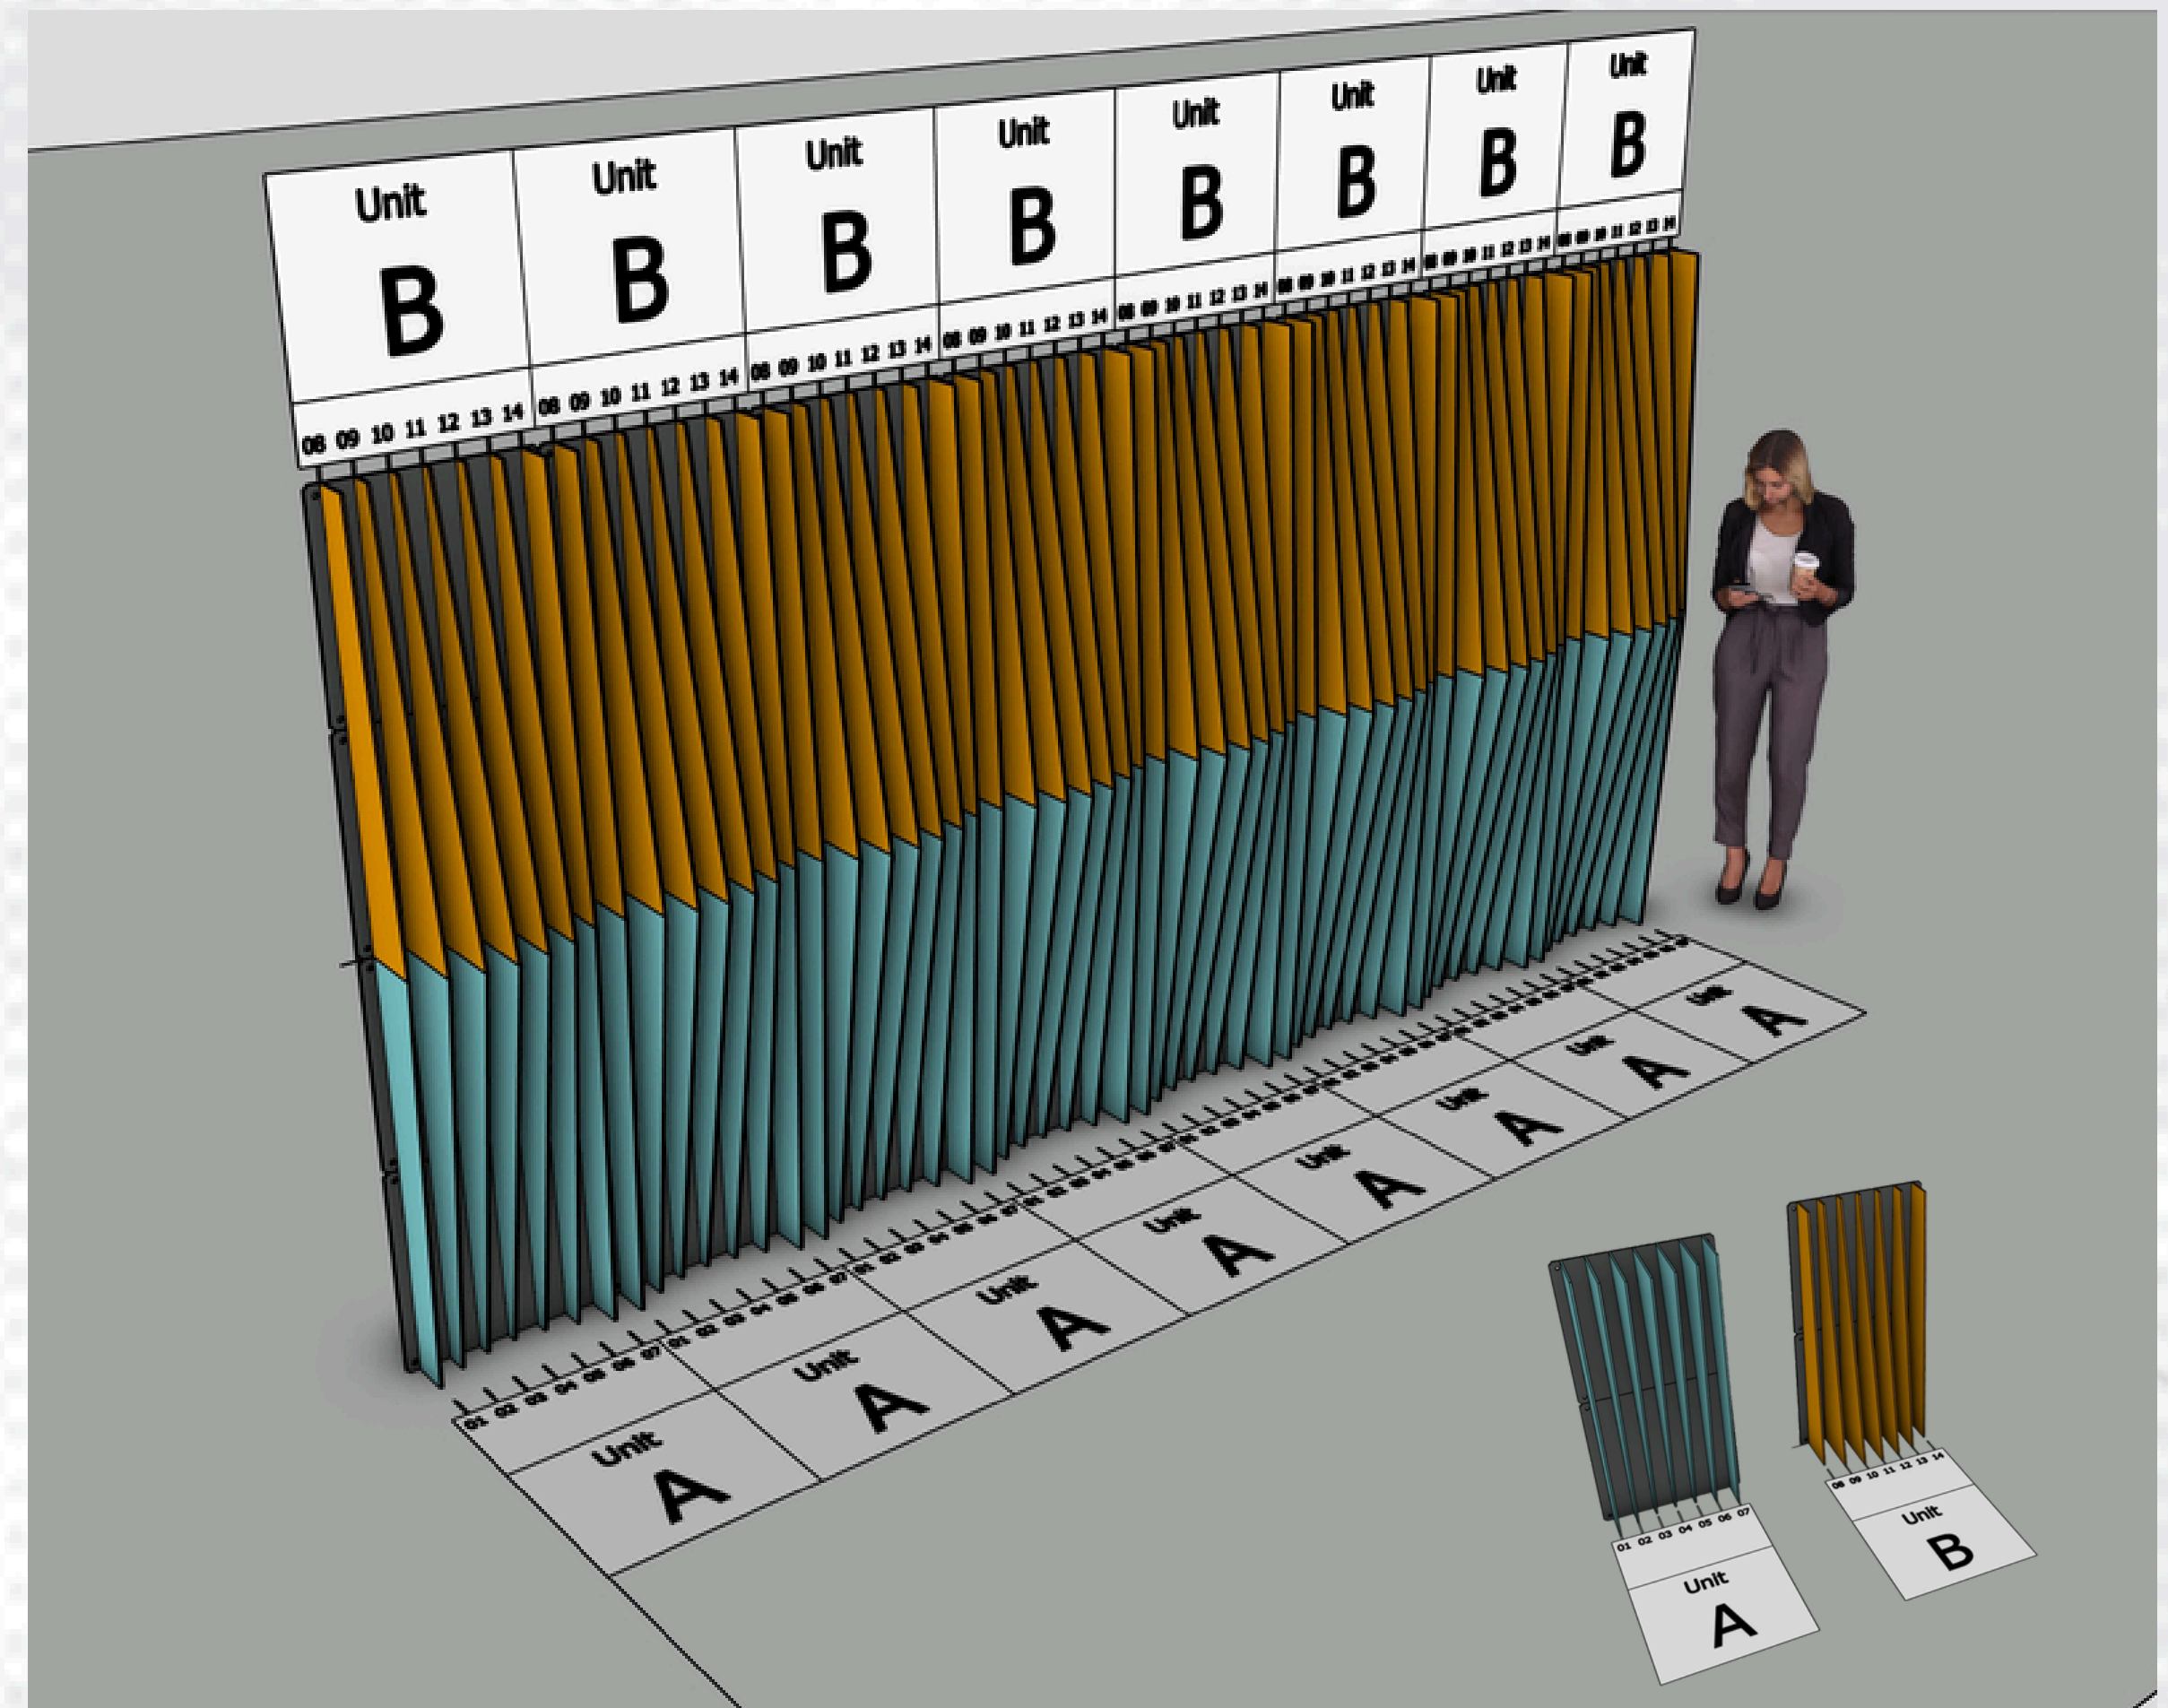

Movement is expressed through volume and proportion.

Best Used For

- Feature walls that should feel substantial and immersive
- Backdrops where visual weight belongs at center stage
- Brand environments that benefit from presence without aggression
- Applications where depth should feel soft, not graphic

Design Notes

- Created by a continuous panel orientation with a central rise
- Emphasizes mass and depth rather than pattern contrast
- Reads strongest at scale and with even lighting
- Ideal when the surface should feel confident, grounded, and quietly expressive
